

Designed to make in-shop fueling effortless and efficient

The portable Pony Tank provides a compact, easy-to-use fueling source for on-site diagnostics, allowing technicians to isolate and identify whether issues originate from the vehicle's fuel system or engine.

Our Pony Tank solution is commonly used as a compact mobile fuel supply, it bypasses the chassis fuel system by connecting directly to the engine's low-pressure fuel filter—allowing vehicles without an installed or fueled system to start and operate.

Key Features & Benefits

Compatible with all fuel system makes

5.5 DGE fuel capacity

Light weight for mobility

Durable and user friendly

Type 4 cylinder, 3,600 PSI

20 year service life
