MEMX EPCs

Targeted exposure to the financial metrics of the world's most valued companies

Introducing MEMX Exchange Prediction Contracts

MEMX's exchange prediction contract ("EPC") uses objective, quantifiable measures of an issuer's financial performance across discrete performance metrics—including earnings, revenues, sales, and other key financial metrics—to give investors greater direct exposure to a company's important financial metrics aside from their stock price.

Unique exposure and intel for market-leading companies

MEMX EPCs are designed as long-only yes/no contracts to give investors a transparent, efficient framework for trading complementary outcomes of a single event question. Because the paired bids for the yes/no contract must sum to the $1 exercise settlement amount, execution prices directly reflect the market's relative valuation of the two possible outcomes. This gives investors unique ways to access price discovery, financial exposure, and hedging opportunities for the most watched publicly traded companies.

Traded on a trusted, registered exchange

EPCs' principles-based, contract-specific methodology is tailored to the unique characteristics of securities event contracts. Contracts trade on MEMX Options, a registered national securities exchange, benefiting from central clearing, know-your-customer requirements, and MEMX's robust regulatory and market-surveillance programs.

MEMX EPCs at a Glance

- Targeted exposure to the financial metrics important to investors, including revenues, earnings, sales, and other key issuer-specific metrics.
- Yes/No contracts are paired in a single pool of liquidity, enabling investors on either side to trade directly with each other at one market price—without unnecessary intermediation.
- $1 notional size so retail investors can invest or hedge in convenient dollar terms.
- Intuitive/Clear price bands ($0.01 - $0.99 per side) to prevent trades where one side pays >= $1.
- Registered exchange trading with central clearing, KYC, and surveillance.
- Available to investors through Interactive Brokers and launching in early 2027, pending SEC approval.

About MEMX

MEMX is a technology-driven exchange operator serving the global investment community. It offers a simpler, more cost-effective, and transparent way to access liquidity through its MEMX Equities and MEMX Options exchanges, as well as by licensing and operating MEMX technology for clients. MX2 Options, a new pro-rata exchange, will go live in 2026, bringing the total number of markets operated by MEMX to six. Founded in 2019 by a diverse group of financial firms, MEMX's mission is to create healthy competition and advocate for market structure reform that results in more efficient and sensible trading experiences for all investors.
